RECYCLING BATTERIES IN BELGIUM?

Where and how to dispose safely of your discarded batteries.

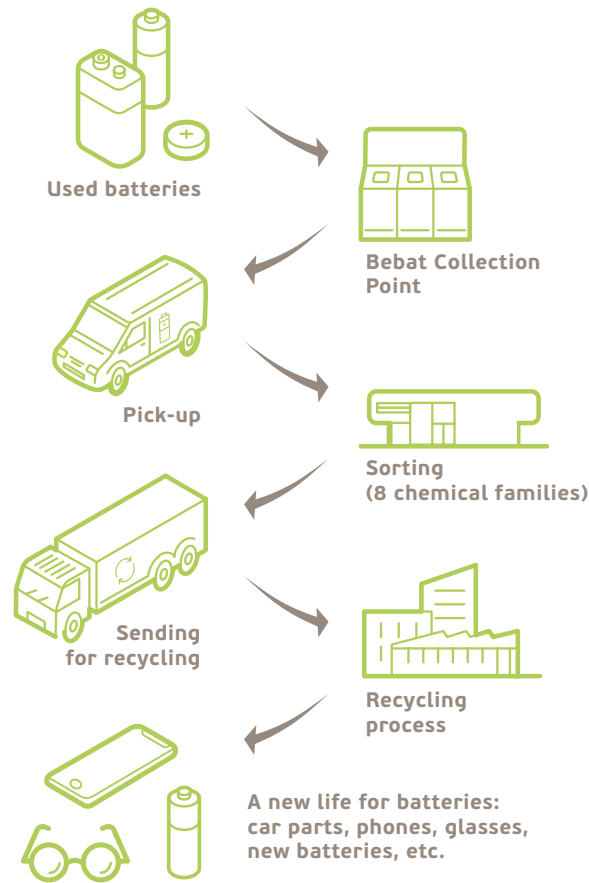

HELLO THERE!

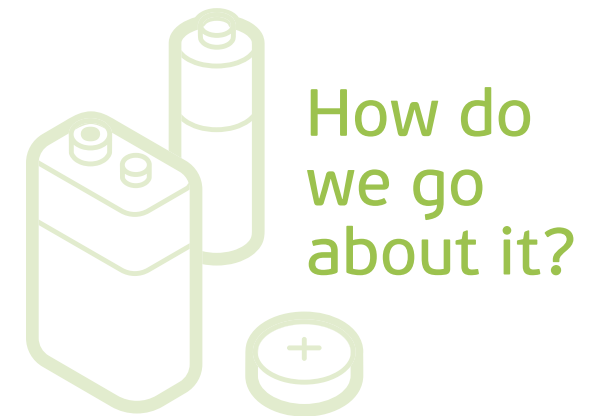

On behalf of Bebat and the local authorities, **we want to welcome you to Belgium!** In this leaflet we'll provide you with a practical overview on how to dispose of your used batteries in Belgium, along with some other interesting battery facts.

Belgium... This tiny country situated in the heart of Europe is most famous for its scrumptious chocolates and timeless love for beer. **But did you know that Belgium is also known for being a land of batteries?**

Batteries go through their entire life cycle in Belgium. In addition, we believe a battery's journey after its first life cycle also deserves special attention.

Belgium is the reigning world champion in the collection of discarded batteries with an annual collected weight of over 3.6 tonnes.

BEBAT STANDS FOR:

- More than **23,500 collection points** spread across the country.
- On average, you'll find one of our green **collection units within 400 m** of you, available in retail stores, schools, public places (e.g town halls), and local recycling parks.
- We offer **free collection containers** to help you manage your used batteries.
- A wide variety of **engaging communication campaigns** both on- and offline.
- An **enthusiastic multilingual team of battery experts** open to all your questions!

DID YOU KNOW?

- 13 discarded batteries provide enough raw materials to produce a spectacle frame? And the raw materials of 120 discarded batteries are enough to make a watering can?
- Curious as to what other objects can be produced with the raw materials of used batteries?
